===================
Suggestions and questions :
===================

- Figure 2b. I would not suppress the zero on the y-axis. Also the value "1.1" on the lower panel is cut off.
Corrected

- l.247. "1.30 ns" -> "1.40 ns" as in the plot ?
See Roman comments. Corrected.

- l.266. I think -150 ns is some strange rounding from -165 ns in the plot ? I suggest to just remove. "around -150 ns which is". And then state the expected value.
I reformulated the sentence and added the plots with all the offsets extracted which is centered around -150 ns.

- l.277. "about 5%". Does not need to be too precise.
Corrected

- Figure 8a, caption. I would remove the last sentence. This is a result and is anyway mentioned in the text.
